Problem Introduction

Di era ini, polusi udara merupakan masalah yang serius bagi kesehatan masyarakat. Pertumbuhan industri yang cepat dan peningkatan aktivitas kendaraan BBM menyebabkan pelepasan polutan berbahaya di udara. Dampak buruknya tidak hanya terbatas pada kesehatan pernapasan manusia, tetapi juga merugikan sistem kardiovaskular serta merusak ekosistem alam.

Proyek ini muncul sebagai respons terhadap kebutuhan mendesak akan sistem pemantauan kualitas udara yang lebih baik dan terpadu. Dengan memahami bahwa tantangan ini melibatkan pemahaman mendalam tentang berbagai parameter lingkungan, termasuk suhu, kelembaban, tekanan, dan resistansi gas. Oleh karena itu, kelompok kami mengusulkan sebuah proyek sistem pemantauan kualitas udara untuk mengatasi permasalahan tersebut.

02

Hardware & Software Implementation Details

Hardware

Desain hardware kami melibatkan ESP32, lampu LED, buzzer, protoboard, LCD, kabel jumper, dan sensor BME680. Menggunakan komunikasi I2C, kami menghubungkan pin SDA dan SCL dari BME680 ke GPIO21 dan GPIO22 pada ESP32. Antarmuka LCD juga menggunakan I2C, dengan bantuan protoboard untuk penyambungan yang rapi. ESP32 berperan sebagai pemroses pusat, mengumpulkan data dari BME680, di mana pemanas sensor memicu reaksi dengan gas VOC, mengubah aliran arus listrik. ESP32 berkomunikasi dengan LCD untuk data real-time dan mengaktifkan LED serta buzzer untuk memberikan peringatan ketika kualitas udara melebihi batas tertentu.

Software

Desain software kami, tertulis dalam satu file .ino, memprogram ESP32 untuk berinteraksi dengan BME680 dan antarmuka serial LCD. ESP32 dan Blynk environment disiapkan dengan library yang diperlukan, seperti Adafruit untuk sensor dan LiquidCrystal untuk komunikasi I2C pada LCD. Sensor BME680 akan terus mengumpulkan data yang dikirimkan ke ESP32 pada interval tertentu, kemudian ditampilkan pada LCD dan aplikasi Blynk. Ketika pembacaan mencapai ambang tertentu, ESP32 memicu LED dan buzzer.

A decorative graphic consisting of several blue circles of varying sizes, some with concentric rings, connected by thin black lines. These elements are arranged in a network-like pattern around the central text, with some lines extending towards the corners of the slide. Ellipses (...) are also present near some of the circles.

03

Test Result & Evaluation

Testing

01

Verifikasi Awal Sensor

Untuk memastikan keakuratan tampilan data di serial monitor.

```
Output  Serial Monitor x
Message (Enter to send message to 'DOIT ESP32 DEVKIT V1' on 'COM4')

Temperature = 30.92 *C
Pressure = 998.55 hPa
Humidity = 71.65 %
Gas = 27.35 KOhms
IAQ Score = 46.7
***** Poor Air Quality *****
Getting a new gas reference value
IAQ Text = Air Quality is Worse
Approx. Altitude = 123.11 m
```

02

Uji Fungsi LED dan Buzzer

Untuk memverifikasi fungsi LED dan buzzer sesuai kondisi yang telah ditetapkan.

03

Uji Integrasi dengan Blynk 2.0

- Untuk memastikan data yang muncul pada layar LCD sama dengan data di aplikasi Blynk
- Melihat seberapa cepat data di aplikasi Blynk memperbarui nilai-nilai yang ditampilkan di LCD.

Result

Hasil tiga uji coba pada rangkaian utama dengan platform Blynk sesuai harapan dan kriteria yang telah ditentukan. Selama pengujian, sistem memastikan operasional yang optimal dan integrasi real-time dengan Blynk. Dalam hasil pengujian tersebut, proyek IoT "AirQu: Sistem Pemantauan Kualitas Udara" berhasil mengintegrasikan hardware dan software, membentuk sistem pemantauan kualitas udara pintar. Sistem ini mampu membaca data dari sensor BME680 dan menampilkannya pada layar LCD serta perangkat pengguna melalui Blynk. Dilengkapi dengan indikator LED sesuai dengan kondisi IAQ dan buzzer yang memberi peringatan saat kualitas udara memburuk, sistem ini efektif memberitahu pengguna untuk mencegah potensi masalah kesehatan.

04

Conclusion

Conclusion

Secara keseluruhan, proyek kami telah berhasil menghasilkan solusi yang efektif untuk memantau kualitas udara di dalam ruangan. Dengan menggunakan sensor BME680, ESP32, LCD display, indikator LED, buzzer, dan Blynk, sistem ini mampu memberikan data kualitas udara secara akurat dan real-time, termasuk suhu, kelembaban, gas, tekanan, dan indeks kualitas udara (IAQ). Integrasi yang solid antara perangkat keras dan perangkat lunak, ditambah responsifnya indikator LED dan peringatan suara dari buzzer, menunjukkan bahwa sistem ini berhasil mencapai tujuan-tujuan yang ditetapkan, memberikan kemudahan penggunaan melalui aplikasi Blynk, serta memberikan pemberitahuan yang cepat terhadap perubahan kualitas udara.

Thanks!
